

## FOR IMMEDIATE RELEASE

### **Sintelsat Provides Satellite Connectivity to One of the Major ISPs in Tbilisi, Georgia**

**Stony Brook, New York, January 2<sup>nd</sup>, 2008**—Sintel Satellite Services, Inc. provides the internet backbone connectivity to a major ISP in Tbilisi, Georgia, a former Soviet Republic. The connectivity will serve hundreds of thousands of users in the politically unstable country of Georgia. Internet services allow people of Georgia to keep connected to the rest of the world and exchange their viewpoint freely.

Tbilisi is the capital and the largest city of Georgia located in the South Caucasus and situated in the East of Georgia. In November 7<sup>th</sup>, a State of Emergency was declared and announced to the public. Despite the shutdown of a major public television channel, the news and the views of the residents were opened to the world. The internet plays an important medium in the middle of the insurgency, instability and any emergencies like the one experiencing by this country today.

Sintelsat services are being provided using Eutelsat satellite and our teleport in Germany. The satellite connectivity was turned on last December and have been tested successfully over a period of 30 days. The services are being provided using satellite SCPC/DVB platform in addition to terrestrial fiber link. The satellite and fiber connectivity together provides a resilient IP network and very high reliability. The IP services are being provided including 24/7 monitoring and technical support from our NOCs around the globe.

#### **About Sintel Satellite Services, Inc.**

Sintel Satellite Services, Inc. (Sintelsat) is a satellite and terrestrial systems integrator with global outreach, providing turnkey end to end communication solutions, networks, and services using Satellite, Fiber, Microwave and Wireless advanced hybrid technologies.
