

SintelSat Selected to Provide Satellite Network Infrastructure Consulting Services to an International Bank in 35 Countries in Africa

Stony Brook, New York , June 13, 2011— SintelSat has been selected to provide consulting services and feasibility study to an International Bank in Africa for a large satellite network to connect 35 countries all over the African Continent. The project would involve understanding the current infrastructure and Bank's new requirement as the technology has evolved over last many years and new applications which the existing network is not able to handle. The new design and network architecture will take into account the growing network, traffic requirements, security, banks new applications, data storage and various applications server connectivity. The new network will initially be based on star topology and later will be upgraded to mesh connectivity. SintelSat will provide a detailed feasibility study and make technical recommendations including technology selection after studying the current infrastructure at the two hub locations and many remote sites. This effort will provide the Bank state of the art technology that will fulfill their requirements for many years to come.

SintelSat has implemented Satellite VSAT Networks in several countries in the past and more recently provided a similar network for the national bank in Afghanistan, Da Afghan Bank, in Kabul connecting the head office with six provinces in Kandahar, Herat, Mazar e Sharif, Jalalabad, Kunduz and Gardez providing them data connectivity, SWIFT money transfer capability and voice over IP connectivity. SintelSat has more than 15 years experience working in Africa and started working in Angola, Mozambique, Cape Verde, Guinea Bissau, Sao Tome back in 1996. Our first project in the continent included uplink broadcast stations for a Portuguese TV channel called RTP, Africa which was broadcasted from Lisbon for the Portuguese African community. Five uplink broadcast stations were set up despite difficult working environment, social unrest, and limited support from the local government. SintelSat thrives in providing cost-effective, innovative solutions designed for local environment in underdeveloped and difficult terrain with limited or poor infrastructure for social upliftment, education, local employment and most of all local economic growth.

About Sintel Satellite Services, Inc. (SintelSat)

SintelSat has evolved from a satellite systems integrator to a cutting edge telecom solutions provider company with global outreach, providing turnkey end to end telecommunication & IT solutions, networks, and services using satellite, fiber, microwave, and wireless technologies. Our solutions are cost-effective based on innovative approach utilizing decades of experience combined with regional & local knowledge in the domestic & emerging markets. Representatives are available in New York, Washington DC and internationally in Germany, Lebanon, India & Philippines and partners in more than 50 countries including Africa, Middle East, Asia and Europe thus providing a complete global presence to implement challenging projects in expedited manner.
