

SintelSat's Network survives a 5.9 magnitude Earthquake and a Category 1 Hurricane in New York without any outages

Stony Brook, New York , August 30, 2011— SintelSat's satellite & telecom network survived a 5.9 - magnitude earthquake that rocked the East Coast. Just a couple of days later, it followed by a massive hurricane, Irene, that forced evacuations and businesses to shutdown around the eastern seaboard including New York. SintelSat, despite these natural disasters, have delivered its services with no outages. This unusual quake on east coast and the massive hurricane with winds upto 85 miles per hour caused a lot of concern, however our robust infrastructure stayed intact with just a few trees fallen down but no major damages and service interruptions to our customers worldwide. The phones were working throughout the hurricane over the weekend with no power failures or the network outages. Our Network Operations Center (NOC) was available as usual 24x7 as it was another sunny day.

SintelSat networks throughout the globe are secured and prepared for the worst case scenarios, both natural and manmade catastrophe. We design our mission critical networks not only with proper backup systems but to have geographic redundancy that would provide automatic switching to another location Hub in case of a disaster. Similar features are deployed with secure data center, SCIF and NOC. SintelSat deploys field engineers worldwide and operates, maintains telecom infrastructure at strategic locations around the globe.

About Sintel Satellite Services, Inc. (SintelSat)

SintelSat has evolved from a satellite systems integrator to a cutting edge telecom solutions provider company with global outreach, providing turnkey end to end telecommunication & IT solutions, networks, and services using satellite, fiber, microwave, and wireless technologies.
